

Boy survives deadly spider bite after taking record 12 vials of anti-venom

10-year-old Matthew Mitchell was bitten on his finger by a deadly Funnel Web Spider that had been hiding in his shoe.

Feb 24th 2017

A 10-YEAR-OLD Australian boy has survived a bite from one of the world's deadliest spiders after taking a record 12 vials of anti-venom according to local media.

Matthew Mitchell was helping his dad clear out the back shed at their home north of Sydney when he was bitten on the finger by a funnel-web spider that had been lurking in his shoe.

"It sort of clawed onto me and all the legs and everything crawled around my finger and I couldn't get it off," he told the Daily Telegraph.

His family used his shirt as a compression bandage to try and slow the venom's spread and rushed him to hospital.

He experienced convulsions but survived after being given 12 vials of

anti-venom, which local media said was an Australian record.

The funnel-web spider is among the world's deadliest. Its venom attacks the nervous system causing foaming at the mouth, muscle spasms and potentially death.

The spider was caught and taken to the Australian Reptile Park where it will be milked as part of their program to develop anti-venom.

The 10-year-old was "as lucky as they get", Australian Reptile Park general manager Tim Faulkner told the Telegraph.

Australia is home to a startling number of the world's deadliest creatures, including snakes, spiders, jellyfish and octopuses.

The funnel web is particularly feared but no deaths have been recorded since anti-venom for its bite was first developed in the 1980s.
